

EXPERIMENT : 05

NAME :Simran Chouhan

SEMESTER :5th

SECTION :24_AIT_KRG-G1-A

UID :24BAI70124

SUBJECT CODE :24CSP-310

SUBJECT NAME :Advanced Database Management
System

FACULTY'S NAME : Mr. Alok Kumar

[A.]

A website maintains records of users who have registered on the platform and the status of confirmation requests sent to them. A confirmation request can either be successfully completed or may expire without completion.

For each registered user, calculate the confirmation rate, which is defined as:

$$\text{Confirmation Rate} = \frac{\text{Number of Successful Confirmations}}{\text{Total Confirmation Requests}}$$

If a user has never received any confirmation request, their confirmation rate should be considered **0**.

Display the user ID along with the confirmation rate rounded to **2 decimal places**. The result can be returned in any order.

Signups		Confirmations		
user_id	time_stamp	user_id	time_stamp	action
3	2020-03-21 10:16:13	3	2021-01-06 03:30:46	timeout
7	2020-01-04 13:57:59	3	2021-07-14 14:00:00	timeout
2	2020-07-29 23:09:44	7	2021-06-12 11:57:29	confirmed
6	2020-12-09 10:39:37	7	2021-06-13 12:58:28	confirmed
		7	2021-06-14 13:59:27	confirmed
		2	2021-01-22 00:00:00	confirmed
		2	2021-02-28 23:59:59	timeout

Output

<u>user_id</u>	confirmation_rate
2	0.50
3	0.00
6	0.00
7	1.00

Ans.

SELECT

s.user_id,

ROUND(

COALESCE(

AVG(CASE

WHEN c.action = 'confirmed' THEN 1.0

ELSE 0.0

END),

0

),

2

) AS confirmation_rate

FROM Signups s

LEFT JOIN Confirmations c

ON s.user_id = c.user_id

GROUP BY s.user_id;

[B.]

A ride-booking company maintains information about trip requests and the users involved in those trips. Some users may be restricted from using the platform,

while others are active participants. Each trip can either be completed successfully or cancelled by one of the participants.

For each day between **2013-10-01** and **2013-10-03**, determine the proportion of canceled trips among all valid trips. A trip should be considered valid only when both the customer and the driver associated with that trip are active users. The final result should display the date and the calculated cancellation rate rounded to two decimal places.

			Trips			
			id	client_id	driver_id	city_id
					status	request_at
Users			1	1	10	1
			2	2	11	1
			3	3	12	6
			4	4	13	6
			5	1	10	1
			6	2	11	6
			7	3	12	6
			8	2	12	12
			9	3	10	12
			10	4	13	12
users_id	banned	role				
1	No	client			completed	2013-10-01
2	Yes	client			cancelled_b y_driver	2013-10-01
3	No	client			completed	2013-10-01
4	No	client			cancelled_b y_client	2013-10-01
10	No	driver			completed	2013-10-02
11	No	driver			completed	2013-10-02
12	No	driver			completed	2013-10-02
13	No	driver			cancelled_b y_driver	2013-10-03

Output

Day	Cancellation Rate
2013-10-01	0.33
2013-10-02	0.00
2013-10-03	0.50

Ans.
